## Professional Summary

Aspiring Data Analyst and Data Scientist with hands-on experience in Machine Learning, Deep Learning, SQL, and Data Visualization. Skilled in building predictive models, performing exploratory data analysis (EDA), and developing end-to-end data-driven solutions using Python and SQL. Developed machine learning and deep learning projects with up to 93% model accuracy and experience in deploying applications using Streamlit. Seeking entry-level opportunities in Data Analytics and Data Science roles.

## Skills

**Programming Languages:** Python, SQL
**Data Analysis & Visualization:** Pandas, NumPy, Power BI, Excel, Matplotlib, Exploratory Data Analysis.
**Machine Learning:** Regression, Classification, Clustering, Model Evaluation, Feature Engineering, Hyperparameter Tuning
**Deep Learning:** TensorFlow, Keras, CNN, Transfer Learning (MobileNetV2)
**Tools:** MySQL, Streamlit, Git, GitHub

## Internship Experience

**Data Analytics Intern** Mar 2026 – Apr 2026
Codec Technologies Pvt. Ltd.

- Cleaned, validated, and transformed structured datasets using Python and SQL to improve data quality and consistency for analysis.
- Executed SQL queries for data extraction, filtering, and reporting to support business decision-making.
- Performed exploratory data analysis and generated insights through reports and visualizations for identifying trends and patterns.

## Projects

**Fish Image Classification** GitHub

- Developed multiclass fish image classification models using CNN and MobileNetV2 on image datasets containing multiple fish categories.
- Preprocessed image datasets and optimized model performance through feature extraction and hyperparameter tuning.
- Achieved 93% classification accuracy and deployed the model using Streamlit for real-time predictions.

**Fraud Detection System** GitHub

- Built fraud detection models using Logistic Regression, Random Forest, and Isolation Forest algorithms to identify suspicious transactions.
- Performed exploratory data analysis and handled imbalanced datasets to improve fraud detection performance.
- Evaluated models using ROC-AUC, precision, recall and F1-score to optimize predictive performance.

**Customer Churn Prediction** GitHub

- Developed customer churn prediction models using Logistic Regression, Random Forest, and XGBoost algorithms.
- Performed feature engineering and comparative model analysis to identify high-risk customers and improve customer retention analysis.
- Improved prediction performance using classification metrics including accuracy, precision, recall, and F1-score.

## Education

**Bachelor of Computer Applications** 2021 – 2024
SRM Institute of Science and Technology
CGPA: 8.34

## Certifications

Master Data Science Program – GUVI (IIT Madras Incubated)
